

Ders4 – Veritabanına Bilgi Girişi ve yeni tablo yaratma

Uygulama4 – Bilgi Girişi (insert into) RnrBooks veritabanı kullanılacak

```
Imports System.Data.SqlClient
Public Class Form1
    Dim cnn As New SqlConnection("Data
Source=(LocalDB)\MSSQLLocalDB;AttachDbFilename=""C:\Users\sct\Documents\DERSLER\BTEP21
0\bahar 18-19\RnrBooks.mdf"";Integrated Security=True;Connect Timeout=30")
    Dim cmd As New SqlCommand
    Dim ds As New DataSet
    Dim da As New SqlDataAdapter

    Private Sub Form1_Load(sender As Object, e As EventArgs) Handles MyBase.Load
        If cnn.State = ConnectionState.Closed Then
            cnn.Open()
            cmd.Connection = cnn
            cmd.CommandType = CommandType.Text
            cmd.CommandText = "select ISBN,Title,Author from Books"
            da.SelectCommand = cmd
            da.Fill(ds)
            DataGridView1.DataSource = ds.Tables(0)
            cnn.Close()
        End If
    End Sub
```

```

End Sub

Private Sub ekleButton_Click(sender As Object, e As EventArgs) Handles
ekleButton.Click
    Try
        If cnn.State = ConnectionState.Closed Then
            cnn.Open()
            ds.Clear()
            cmd.Connection = cnn
            cmd.CommandType = CommandType.Text
            cmd.Parameters.Clear()

            cmd.CommandText = "insert into Books(ISBN,Title,Author)
values(@ISBN,@Title,@Author)"
            cmd.Parameters.Add("@ISBN", SqlDbType.NVarChar).Value =
ISBNTextBox.Text
            cmd.Parameters.Add("@Title", SqlDbType.NVarChar).Value =
titleTextBox.Text
            cmd.Parameters.Add("@Author", SqlDbType.NVarChar).Value =
AuthorTextBox.Text
            cmd.ExecuteNonQuery()
            MessageBox.Show("kayit eklendi")
            cmd.CommandText = "select ISBN, Title, Author from Books"
            da.SelectCommand = cmd
            da.Fill(ds)
            DataGridView1.DataSource = ds.Tables(0)
            cnn.Close()
        End If
    Catch ex As Exception
        MessageBox.Show(ex.Message)
        cnn.Close()
    End Try
End Sub
End Class

```

Uygulama5 – Yeni tablo yaratma

- veritabanı oluştur,
- tablo yarat,
- bağlantı kur,
- datagrid view a bilgileri getir
- veritabanına bilgi girişi yap

Adımlar:

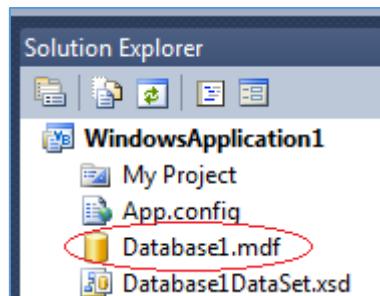

1. yeni bir proje yarat

2. yeni veritabanı yarat

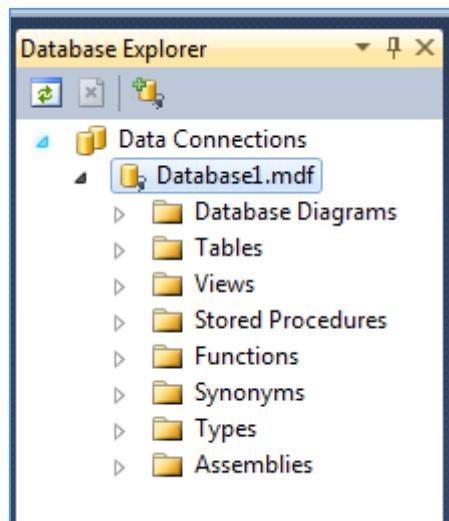

project → add new item → service-based database

next → finish

solution explorer de .mdf uzantılı bir dosya oluşacak

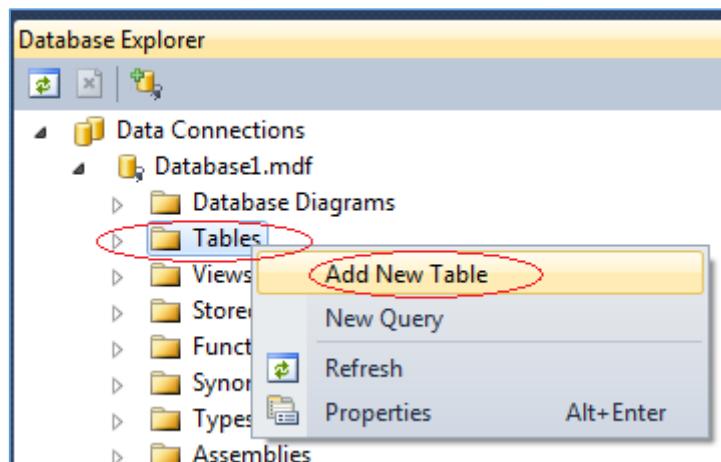

3. .mdf dosyasına çift tıklandıktan sonra sol tarafta database explorer açılacak (full visual studio yüklü değilse server explorer (sanırım) olarak açılacaktır)

4. Tablo yaratmak için

Tables üzerine sağ tıkla → add new table i seç

Aşağıdaki gibi tablo yarat → update → update database

The screenshot shows the 'dbo.Table [Design]' window. The table structure is defined as follows:

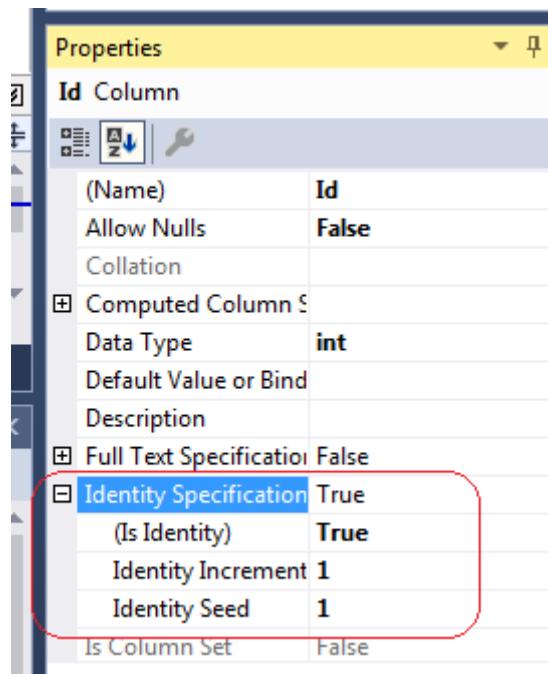

| | Name | Data Type | Allow Nulls | Default |
|---|------|--------------|-------------------------------------|---------|
| 1 | Id | int | <input type="checkbox"/> | |
| 2 | isim | nvarchar(50) | <input checked="" type="checkbox"/> | |
| 3 | yas | nchar(10) | <input checked="" type="checkbox"/> | |

Below the table structure, the T-SQL code for creating the table is shown:

```
1 CREATE TABLE [dbo].[Table]
2 (
3     [Id] INT NOT NULL PRIMARY KEY,
4     [isim] NVARCHAR(50) NULL,
5     [yas] NCHAR(10) NULL
6 )
```

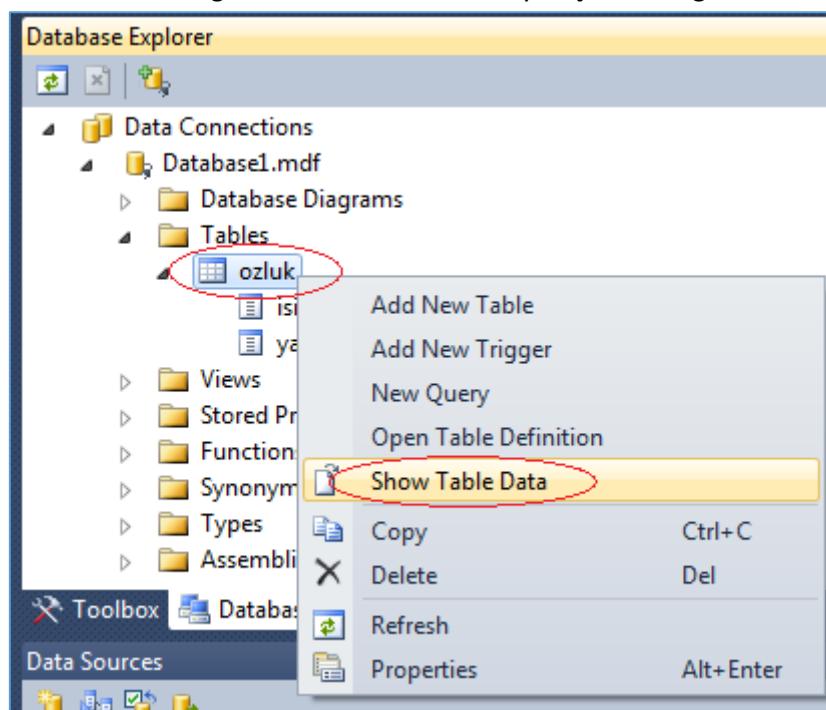

Server explorer → refresh yap

Bilgi Girişi yapmadan önce id nin properties penceresinden Identity Specification özelliğini True yapın

5. Tabloya bilgi girişi yapın

Tables üzerine sağ tıkla → show table data yi seç ve istediğiniz kadar satır ekle

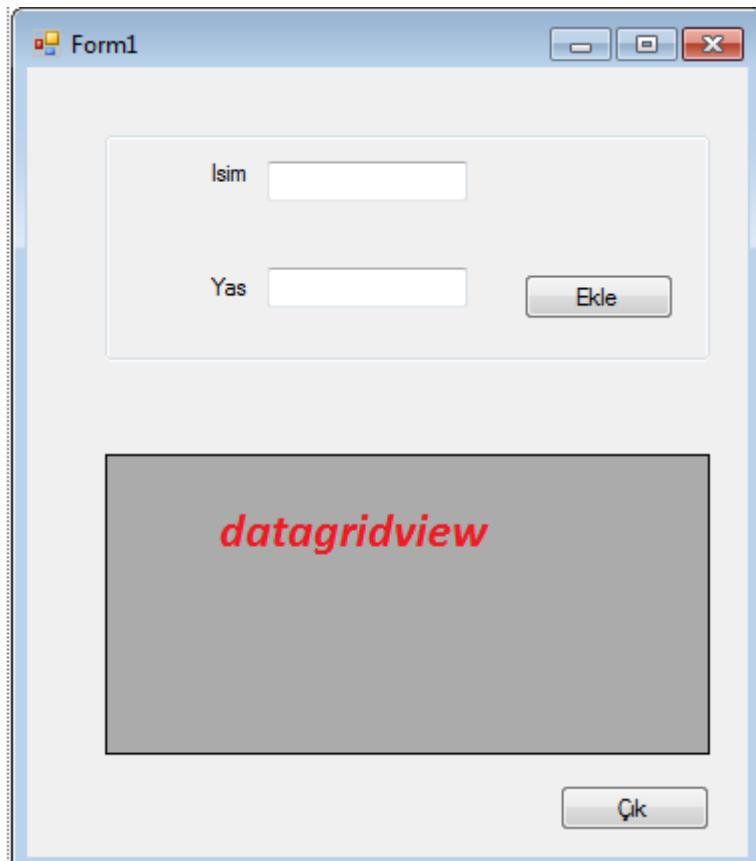

Ben üç satır ekledim. Sizler daha çok ekleyebilirsiniz. Ya da hiç de eklemeyebilirsiniz.
Ve Refresh e tıklayın

dbo.Table [Data] X dbo.Table [Design] Form1.vb [Design]*

Max Rows: 1000

| | Id | isim | yas |
|---|------|--------|------|
| ▶ | 1 | Tarkan | 21 |
| | 2 | Murat | 21 |
| | 3 | Emel | 22 |
| * | NULL | NULL | NULL |

6. Aşağıdaki gibi Formunu yarat

7. Artık kod yazmaya geçebiliriz.

```
Imports System.Data.SqlClient
Public Class Form1
    Dim cnn As New SqlConnection("Data
Source=(LocalDB)\MSSQLLocalDB;AttachDbFilename=""C:\Users\sct\Documents\DERSLER\BTE
P210\bahar 18-19\veritabani\uygulama5\uygulama5\Database1.mdf"";Integrated
Security=True")
    Dim cmd As New SqlCommand
    Dim ds As New DataSet
    Dim da As New SqlDataAdapter
    Private Sub Form1_Load(sender As Object, e As EventArgs) Handles MyBase.Load
        If cnn.State = ConnectionState.Closed Then
            cnn.Open()
        End If
        cmd.Connection = cnn
        cmd.CommandType = CommandType.Text
    End Sub
End Class
```

```

        cmd.CommandText = "select isim, yas from [Table]"
        da.SelectCommand = cmd
        da.Fill(ds)
        DataGridView1.DataSource = ds.Tables(0)
        cnn.Close()
    End If
End Sub

Private Sub ekleButton_Click(sender As Object, e As EventArgs) Handles
ekleButton.Click
    Try
        If cnn.State = ConnectionState.Closed Then
            cnn.Open()
            ds.Clear()
            cmd.Connection = cnn
            cmd.CommandType = CommandType.Text
            cmd.Parameters.Clear()

values(@isim,@yas")
        TextBox2.Text
        cmd.CommandText = "insert into [Table](isim,yas)
cmd.Parameters.Add("@isim", SqlDbType.NVarChar).Value =
cmd.Parameters.Add("@yas", SqlDbType.NVarChar).Value =
        TextBox3.Text

        cmd.ExecuteNonQuery()
        MessageBox.Show("kayit eklendi")
        TextBox2.Clear()
        TextBox3.Clear()

        cmd.CommandText = "select isim,yas from [Table]"
        da.SelectCommand = cmd
        da.Fill(ds)
        DataGridView1.DataSource = ds.Tables(0)
        cnn.Close()
    End If
Catch ex As Exception
    MessageBox.Show(ex.Message)
    cnn.Close()
End Try
End Sub

Private Sub cikButton_Click(sender As Object, e As EventArgs) Handles
cikButton.Click
    Close()
End Sub
End Class

```
