

## How Create multiple site on a single dashboard

---

To enable the Network Setup menu item, you must first enable multisite in the **wp-config.php** file.

Open up wp-config.php and add this line **above** where it says `/* That's all, stop editing! Happy blogging. */`. If it doesn't say that anywhere, then add the line somewhere above the first line that begins with `require` or `include`:

```
/* Multisite */  
define( 'WP_ALLOW_MULTISITE', true );
```

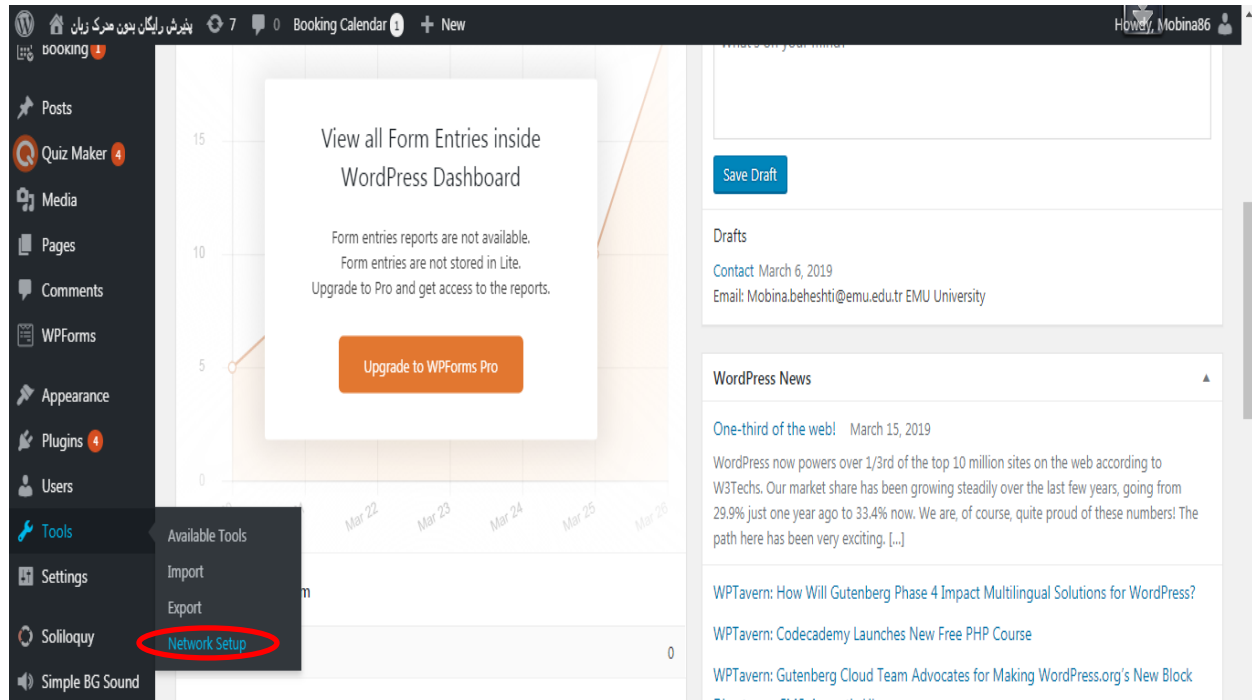

```
1 ..... 2 ..... 3 ..... 4 ..... 5 ..... 6 ..... 7 .....  
    * a unique prefix. Only numbers, letters, and underscores  
    please!  
    */  
    $table_prefix = 'wp_';  
  
    /**  
     * For developers: WordPress debugging mode.  
     *  
     * Change this to true to enable the display of notices during  
     * development.  
     * It is strongly recommended that plugin and theme developers  
     * use WP_DEBUG  
     * in their development environments.  
     *  
     * For information on other constants that can be used for  
     * debugging,  
     * visit the Codex.  
     *  
     * @link https://codex.wordpress.org/Debugging_in_WordPress  
     */  
    define('WP_DEBUG', false);  
    /* That's all, stop editing! Happy blogging. */  
  
    /** Absolute path to the WordPress directory. */  
    if ( !defined('ABSPATH') )  
        define('ABSPATH', dirname(__FILE__) . '/');  
  
    /** Sets up WordPress vars and included files. */  
    require_once(ABSPATH . 'wp-settings.php');
```

You will need to refresh your browser to continue.

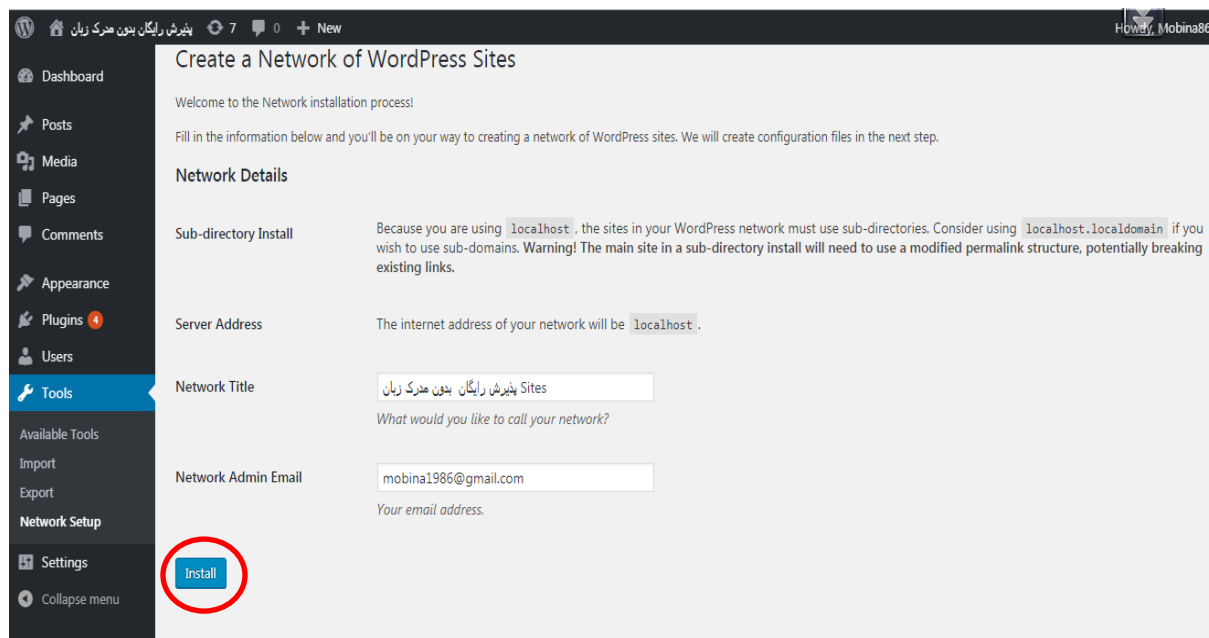

## Installing a Network

The previous step enables the **Network Setup** item in your **Tools** menu. Use that menu item to go to the **Network Setup** screen.

You may asked to deactivate your plugins before starting installation!

Then you can install the network :

**Follow the given steps in the installation page :**

**1- Step 1:**

Add the following to your wp-config.php file in C:/wamp64/www/wp/ **above** the line reading /\* That's all, stop editing! Happy blogging. \*/:

```
define('MULTISITE', true);
define('SUBDOMAIN_INSTALL', false);
define('DOMAIN_CURRENT_SITE', 'localhost');
define('PATH_CURRENT_SITE', '/wp/');
define('SITE_ID_CURRENT_SITE', 1);
define('BLOG_ID_CURRENT_SITE', 1);
```

**2- Step 2:**

Add the following to your .htaccess file in C:/wamp64/www/wp/, **replacing** other WordPress rules:

```
RewriteEngine On
RewriteBase /wp/
RewriteRule ^index\.php$ - [L]
# add a trailing slash to /wp-admin
RewriteRule ^([_0-9a-zA-Z-]+)/wp-admin$ $1wp-admin/ [R=301,L]
RewriteCond %{REQUEST_FILENAME} -f [OR]
RewriteCond %{REQUEST_FILENAME} -d
RewriteRule ^ - [L]
RewriteRule ^([_0-9a-zA-Z-]+)/?(wp-(content|admin|includes).*) $2 [L]
RewriteRule ^([_0-9a-zA-Z-]+)/?(.*\.php)$ $2 [L]
RewriteRule . index.php [L]
```

**Once you complete these steps, your network is enabled and configured. You will have to log in again. Log In**
