CMPE416 Object Oriented Programming and Graphical User Interfaces						
Department:			0 0	-		
Computer Engine	ering					
<b>Program Name:</b>						
Computer Engine	ering		Program Code: 25			
Course Number:		Credits:		Year/Semester:		
CMPF416		4 Cr		2021-2022 Summer		
		1 01		2021 2022 Summer		
Required Cou	ırse 🛛 Ele	ective Course (	click on and check the ap	ppropriate box)		
<b>Prerequisite</b> (s):						
CMI L211						
Catalog Descript	tion:	tructure of IAVA it	a hisst arianted sensets th	a similarities and differences with C. He must		
The student is to lea	arn the language s	experience in JAVA, its	s object oriented aspects, in	le similarities and differences with C. He must		
Concerning the en	ncar programming	languaga wa will	focus on the implementation	ion of Graphical Usar Interfaces as well as		
concerning the ap	Blueprints and c	naliguage, we will	nted development methods	lon of Oraphical User Interfaces as well as		
animation programs	s. Brueprints and a	i practical object one	ented development methodo	biogy will be given for such applications.		
Course Web Pag	ge:					
http://cmpe.emu.e	edu.tr/					
Textbook(s):						
Java in a Nutshell -	5th Edition;or6th	Edition; David Flan	agan; O'REILLY.			
Lab Manual:						
NA						
<b>Indicative Basic</b>	<b>Reading List :</b>					
JAVA - How to pr	ogram; Deitel & I	Deitel; Prentice Hall	International.			
SUN tutorials on JA	AVA (Web pages a	at www.java.sun	.com).			
An Introduction to	Object-Oriented P	rogramming with Ja	va, C Thomas Wu, McGrav	w Hill International Edition.		
<b>Topics Covered</b>	and Class Sche	dule:				
(4 hours of lectu	res per week)					
Week 1-2-3	Data structur	es and programmi	ng structures: <i>Primitive da</i>	ta types: Reference data types:		
WEEK I 2 5	Operators and	expressions: Staten	nents: Methods and passin	g of arguments: Method		
	overloading: A	Arravs: Strings.	ienns, nzenneus unu pussin	g of <i>a</i> . gameno, income		
	Classes of obj	ects and object orie	ented programming: Princ	ciple of object oriented		
	programming	Using objects; Def	inition of classes; Subclass	ses and inheritance; Nested top-level		
	classes and interfaces; Inner classes.					
	Graphical User Interfaces: Containers and components of a GUI: GUI hierarchy of containers					
	and components; blueprint for the definition of a GUI; Tuning the aspect of the GUI; Some					
W 1.2	available cont	uners ana compone	nus; Events created by con	uainers ana components.		
Week 3	Midterm Exa	m (18.08.22, 9:00	)			
	<u>Graphical Us</u>	er Interfaces: Conto	iners and components of a	a GUI; GUI hierarchy of containers		
	and componer	its; blueprint for the	e definition of a GUI; Tun	ing the aspect of the GUI; Some		
	available containers and components; Events created by containers and components.					
Week 4-5	<u>Various useful classes:</u> String manipulation; Mathematical functions; Standard input / output; File input / output: Various system features: Hashtable: Useful graphical classes					
	Craphics Dr	awing instructions	Painting of containers a	Jui 5 upricui cuisses. nd components: Custom painting of		
	<u>oraphics.</u> Drawing instructions, Fainting of containers and components; Custom painting of container or component.					
	Threads: Ru	nning several thread	ls concurrently; Coherence	e of shared data; thread termination.		
Week 6	Final Exami	nation				

#### Laboratory Schedule: (4 hours of laboratory per week)

Week 2	Tutorial
WOOK Z	1 utoriai

Week 3 Lab 1-2

Week 4 Lab 2-3

Week 5 Lab 3-4

1.

# **Course Learning Outcomes:**

At the end of the course, student must be able to

- possess the mathematical knowledge and skills necessary to the analysis of algorithms:
- Reinforce mathematical fundamentals including techniques for solving summations and recurrences and the asymptotic growth rate of functions.
- 2. gain insight into algorithmic design and how it is affected by and/or affects algorithmic logic, structure, and performance:

Apply proof techniques and mathematical concepts to demonstrate the correctness and assess the performance of standard algorithms.

- 3. demonstrate their ability to carry out a complete algorithmic design process (design, analysis, implementation, results):
  - Address problems involving algorithmic design, analysis, and implementation.
- 4. gain an understanding of certain classes of algorithms, along with models for future algorithmic work:

Introduce a number of standard algorithms, both classical and modern, as objects for algorithmic analysis.

Assessment	Method	No	Percentage
	Midterm Exam(s)	1	40%
	Lab Work(s)	6	15%
	Final Examination	1	45%
	1 0 11		

### \*Attendance is compulsory for this course. If you miss 10% of the total attendance you will get NG.

# Contribution of Course to Criterion 5

Credit Hours for:

Mathematics & Basic Science : 0

Engineering Sciences and Design : 4

General Education : 0

# **Relationship of Course to Program Outcomes**

### The course supports achievement of the following program objectives

- I. identify, formulate and solve computer engineering and science problems ...
- VII. apply modern engineering tools and techniques innovatively;

• X. Pursue graduate studies in related fields.

### This course is used to assess the following items of Program Outcomes

- e) an ability to identify, formulate, and solve engineering problems, (CLO item 3)
- k) use the techniques, skills, and modern engineering tools necessary for engineering practice, (CLO item 4)
