

WEBSITE PROJECT

Topic:

You need to build a website for Famagusta Municipality. Your website should contain:

- Banner (Image, Flash or etc.),
- Text (Detailed Information),
- Supporting images and videos,
- Background (Colour, Image or etc.),
- City map (Google Map or etc.)
- Social media links (Facebook, Twitter and etc.),
- E-mail form (HTML, JavaScript, PHP, MySQL and etc.),
- Other related pages and information,
- Resources (if you have any).

Note 1: Three / four students should come together in order to create a project group. After informing the instructor, group members can immediately start working on their projects. At the end of the semester, group members will present their products about 10-15 minutes. The source codes must be copied onto a CD and submitted with a user-guide (Hard Copy) which consists of related descriptions and supporting images.

Note 2: You can use any editor (and any programming language such as *PHP* or *ASP.NET*, if it is necessary) while you are building your website. However, *Content Management Systems* are not allowed.

Note 3: You can also use <http://magusa.org/en/> as reference.
