Given the following relations, express each query below using relational algebra"
Hotel (hotelNo, hotelName, city)
Room (roomNo, hotelNo, type, price)
Booking(hotelNo, guestNo, dateFrom, dateTo, roomNo)
Guest (guestNo, guestName, guestAddress)
a) The names of all cities where the hotels are.

$$
\prod_{a y}(\text { Hotel })
$$

b) Room numbers of all rooms at the hotel with hotel number 1101 which are more expensive than $\$ 100$.

$$
\prod_{\text {roomNo }}\left(\sigma_{\text {price>100^notelNo=1101 }}(\text { Room })\right)
$$

c) Names of all hotels who have some rooms more expensive than $\$ 200$.

$$
\prod_{\text {hote } \ln \text { ame }}\left(\text { Hotel }|\times| \sigma_{\text {price } 2200}(\text { Room })\right)^{\text {natural join }}
$$

d) Names of guests who entered the hotel number 1400 on $25 / 10 / 2002$

$$
\text { temp } \leftarrow \sigma_{\text {dateFrom }=" 250 c t 2002 " \text { " hotelNo=1400 }}(\text { Booking })
$$

$$
\prod_{\text {guestName }}(\text { temp }|\times| \quad \text { Guest })
$$

e) Increase the price of all rooms more expensive than $\$ 100$ by $\$ 20$ and the price of all other rooms by $\$ 10$.

Room $\leftarrow \prod_{\text {roomNo, hotelNo,tppe,price } 20}\left(\sigma_{\text {prices } 100}(\right.$ Room $\left.)\right) \cup \prod_{\text {roomNo, hooteNo,tppe,pricet } 10}\left(\sigma_{\text {prices100 }}(\right.$ Room $\left.)\right)$
f) "Golf Resort Hotel" with hotel no 2140 will not operate during the year 2005. Remove this hotel and its reservations from the database.

$$
\begin{aligned}
& \text { Hotel } \leftarrow \text { Hotel }-\sigma_{\text {roomNo }=2140}(\text { Hotel }) \\
& \text { Room } \leftarrow \text { Room }-\sigma_{\text {roomNo }=2140}(\text { Room }) \\
& \text { Booking } \leftarrow \text { Booking }-\sigma_{\text {roomNo }=2140}(\text { Booking })
\end{aligned}
$$

g) Find the average room price for every hotel New York. $\square$

$$
\text { hotelNo } G_{\text {avg (price) }}\left(\text { Room }|\times|\left(\sigma_{\text {city }=\text { "Noew York" }}(\text { Hotel })\right)\right)
$$
