

CMPE 108 - Experiment 7

Functions

OBJECTIVES:

- Understand how to edit, compile and execute C computer codes.
- Understand C programming: Functions

NOTES:

- You should prepare the preliminary work before coming to the laboratory session and bring soft or hard copies of the preliminary work with you.
- Before writing a computer code, you should do the following steps:
 - 1) understand and analyze the problem,
 - 2) develop an algorithm and/or flowchart,
 - 3) convert the algorithm and/or the flowchart into a C code.

PRELIMINARY WORK:

1. Write down the output of the following C programs.

a)

```
#include <stdio.h>
float avg(float, float);

int main()
{   float y1, y2, average;
    y1=5.0;
    y2=7.0;
    average = avg(y1, y2);
    printf("y1 = %f \ny2=%f \n The average is=
    %f", y1, y2, average);
    return 0;
}

float avg(float x1, float x2)
{   float result;
    result = (x1+x2)/2;
    return result;
}
```

b)

```
#include <stdio.h>

float square ( float x);

void main( )
{ float m, n ;
printf ( "\nEnter some number for
finding square \n");

scanf ( "%f", &m ) ;
n = square ( m ) ;
printf ( "\nSquare of the given
number %f is %f",m,n );
}

float square ( float x )
{
    float p ;
    p = x * x ;
    return  p ;
}
```

c)

```
#include <stdio.h>

void swap(int a, int b);
int main()
{ int m = 22, n = 44;
printf(" values before swap  m =
%d \nand n = %d", m, n);
    swap(m, n);
}

void swap(int a, int b)
{ int tmp;
    tmp = a;
    a = b;
    b = tmp;
    printf(" \nvalues after swap m
= %d\n and n = %d", a, b);
}
```

d)

T

```
#include <stdio.h>
int f(int a)
{   return a%2 ? ++a : a--; }

void main()
{   int i , a = 2;
    for (i = 0 ; i < 5 ; i++)
    {   a += i;
        printf("(%d,%d)",i,f(a));
    }
}
```

age2

1. Write a C program, **Using Functions** that will ask the user to enter a temperature in Fahrenheit and display it in Celsius.

Fahrenheit to Celsius formula is: Celcius= $(5/9) * (\text{Fahrenheit} - 32)$.

2. Write a C program that reads a series of numbers, from the keyboard. Write three functions that will find the largest number, the average of all numbers, and the number of positive numbers.
